

## Connecting to the ReadyTech Virtual Lab Environment (pre-class)

### Background:

The virtual lab environment is provided by ReadyTech; you connect to it via a standard web browser connection. To make this process as simple as possible, we strongly recommend that you use a browser that supports HTML5. We also urge you to test this connection in advance of the training, and on the same machine that you will use for the training. Here is a list of browsers that currently support HTML5 (as of 2/27/2015):

- Internet Explorer 10 or higher
- Firefox 11 or higher
- Chrome 16 or higher
- Safari 6 or higher
- Opera 12 or higher

### Procedure:

1. Open a web browser and go to the training portal <https://windriver.instructorled.training>.

*Note: If your browser does not support HTML5 you will see a message about upgrading your browser and the link to the non-HTML5 portal. If you decide to use the non-HTML5 portal follow the pre-testing instructions there.*

2. On the **Login** page enter the test access code **5544332211**.
3. On the **Lab** page, click the thumbnail. You should see the remote desktop. This means you have successfully connected.
4. Logout of the test machine by selecting **Logout** from the right-most menu.

The access code for your class will be provided at the start of the training.

If you have any trouble connecting, send an email to [get-support@readytech.com](mailto:get-support@readytech.com) or call +1-510-289-8992. ReadyTech technical support is available 24/7.
